The following courses were presented at WUSS '99 by:

Destiny Corporation
100 Great Meadow Road, Suite 601
Wethersfield, CT 06109

Macros - Beginnin

This workshop will introduce macro variables, CALL SYMPUT, and SYMGET along with %macro, %mend bundles of code. Attendees will understand how to macro-ize programs for simpler, more efficient processing.

Macros - Advanced

This session is designed to discuss advanced uses of macros in SAS Software. Discussions of interfacing with the data step, creating programs that write themselves based on the data available, use of %DO loops, and advanced SYMPUT/SYMGET techniques will be covered. (Assumes some knowledge of macros.)

Moving Data Into and Out of SAS

This workshop will demonstrate how to move data into and out of SAS to external applications such as Word or Excel.

PROC Report (batch)

Learn how to develop reports in a batch environment.

Setting Up and Navigating V7

Detailed description not available at press time.

SQL - Beginning

Attendees will get hands on experience writing PROC SQL code, typically used to simplify extraction & summarization of data. SQL code will be built from simple selects to complex joins.

SQL - Advanced

This session is designed to take attendees into the advanced uses of SQL, including HAVING, Full Joins and creation of Views, Indexes & Data Sets. (Assumes some knowledge of SQL.)

Web Publishing in SAS

This session is designed to demonstrate how publishing SAS output in HTML and GIF form works. Web Macros and their uses in existing programs will be discussed.
